### Vision

Existing handmade Jewelry is produced in small amount. So only a very small number of wealthy customers can afford the high price as main customers. However, we are developing and selling branded luxury and fashionable Jewelry in various designs and reasonable price due to technological development.

### Product Description

Besides our own 100~ point design products. We can customize the products according to different requirements, cultures and customs of each country.

There is no competitor in processing fashion Jewelry by molding the stone with a special method.

### Product Features

The process of processing stone to match the mold of enamel is a work that only the skilled grinder has artistic ability and workability can do. Moreover, it takes a lot of time and has a problem of low productivity. And replaced the stones used for the accessories.

To overcome these difficulties. We have researched and developed for 10 years and found out minelite by using the volcanic eruption principle which keeps the color and the high durability of melted minerals such as grystal, zirconia, minerals and rare earths.

Now we are manufacturing and selling bridal jewelries.  
All products are available in 14k & 18K gold

## Jewelry that always makes me laugh

It is possible with BRIJIN which has nature.  
Comfortable, warm colors. It always makes me laugh.  
Like a companion always with me.

BRIJIN Art Jewellery

*Brijin*

BRIJIN Art Jewelry products are the most expensive items and the highest level in the jewelry industry, which are much higher than the general products being sold in the gold and silversmith's shops.

We produce the items by the special manufacturing method which keeps the color and the high durability of melted minerals such as crystal, zirconia, minerals and rare earths by applying the volcanic eruption principle. It is highly productive compared to conventional manual work and it is a high value-added product. Especially, even Tiffany, Cartier and China which are famous foreign Jewelry brands cannot imitate from the original, and so there is no competitor in the country.

Cutting the jewels and fitting them into the jewelry frame is very handcrafted by only the craftsmen or the best grinding companies, which causes its low production. The plastic color adhesives, which are petroleum extracts such as enamel, cloisonne, etc., are also used in accessories for foreign famous brands. It is not true Jewelry products.

As our products are made of melted natural minerals, light and shine are permanent and there is no scratch, so we made one synthetic gem mineral to match its natural strength. Therefore, this mineral has been given the name of minerite, a compound of minerals and light, and only DAJIN JEWELERY can produce this product all over the world. This technology is a product of gem engineering that has been successfully developed through the repeated experiments over 10 years by DAJIN JEWELERY.

All products are available in 10k .14k & 18k gold.
